

The Q Delivery Vehicle is a totally electric vehicle.

It costs less to run than a diesel van (as little as 5 pence per mile). It is exempt from congestion charges and road tax. It doesn't fill the air with noxious exhaust fumes.

It can carry a load of 1.6 tonnes and cruise at 30mph. It can go 70 miles between charges.

Cheaper, more efficient, more attractive, better for the environment and better for your company's public relations than any of the alternatives. Isn't it about time you considered switching to electric?

The QDV has space-age looks but its modernity goes more than skin deep. The aerodynamic, exterior wraps around a specially designed chassis, a custom built electric drive-train and the very latest, high power, batteries.

A wide range of cargo unit options (including refrigerated units) is available. Battery options and load capacity can be varied to suit client needs.

For further information, details of customisation options or a test drive of the Q Delivery Vehicle please call our office.
